Title: "MOONLIGHT MAZE"

Synopsis: To request identification of appropriate SIOC operations facilities for Moonlight Maze Coordination Group.

Details: The Moonlight Maze Coordination Group (MMCG) has been verbally advised that the SIOC facility which it currently occupies, [redacted] will be required for NATO operations on or about April 15, 1999.

b7E

The MMCG is deploying personnel to Moscow, Russia, on April 2, 1999, in support of the above captioned investigation. In order to maintain proper support for the deployed personnel and to assure continuity of operations, the MMCG requests that SIOC staff identify which SIOC operations room the MMCG will be assigned after vacating [redacted] Rapid identification of this facility is requested, as considerable logistical challenges must be addressed, including movement of substantial quantities of computer hardware and communications gear and dissemination of new telephone and fax numbers.

The MMCG anticipates occupying the newly-assigned facility until about May 15, 1999.

FD-302 (Rev. 10-6-95)

FEDERAL BUREAU OF INVESTIGATION

Date of transcription 8/4/98

On July 29, 1998, at approximately 10:30 a.m., FA [redacted] received a call from [redacted] at South Carolina Research Authority, 5300 International Blvd., North Charleston, South Carolina, telephone number [redacted] pager number [redacted] b6 b7C

This information is in relation to what is believed to be Foreign Computer Hackers Operating out of Russia. [redacted] informed FA [redacted] that he believes the Russians entered though South Carolina Research Authority (SCRA), computer system and then proceeded through the Wright Air force Base computer system. After copying a file onto the South Carolina Research Authority Computer Networking Company computer, the Russians then copied the file over to their system. Before the Russians copied the file over to their system, one of the SRA employees copied these files and saved the work for future reference.

The address used by the Russians was 25dot m9-3dot dial up dot Orc dot ru. The address used to get in the Wright Patterson Air force Base [redacted] b7E

[redacted] b6 b7C stated there was an extensive amount of files transfer. He felt sure his employee copied all the information before the files left the system. This was attempted once before with out a breakthrough.

Investigation on 7/29/98 at CHARLESTON, SC (telephonically)

OFFICE OF
INFORMATION
TECHNOLOGIES

IUSB

Dear [redacted]

It was a pleasure to meet you yesterday when you dropped off the "Application for" ensuing Court Order for the information indicated within the Appendix of the Order. indicated to you, I would expect that this request for information will require no Sea Warrant at this time until you deem it necessary to go down to the level of the conte individual user files. I regard all system files you have requested, and that which w gather relevant to your needs, as to be available with no dispute. I will detail some complications relative to timeliness of production on some of that which you seek, b can expect our full cooperation. This will be cleared with Indiana University Legal Counsel, as well.

We can readily supply that information sought in Appendix A- items 1, 4, and the S employees or the Student ID number (the latter is generally the SSN) This is becaus items comprise the relevant information we collect and retain relative to establishme userid for our computer accounts on our locally administered host oit1.iusb.edu. Th 2, 3, and the rest of 5 are part of employee/student databases which are officially kep housed in Bloomington, (Indiana University) and are not readily available to us in S Bend since we are a centrally administered University system. We do retain some lo employee information regarding that sought under 2, 3 and 5, but that can not be reac practically joined with our account information within your three day timeline stated Court Order.

It may be an overkill of information gathering at this stage for us, given the nature of information directly available to us. I would offer that if the investigation identifies problems out of the approximately 11,000 accounts which may be represented in the you will receive, that it might be better if we supply you the additional information regarding specific targets. Once specific targets have been identified from a prelimin investigation, a specific information look-up can be done in very short order, at that t

This suggestion by no means challenges your authority to seek the information nor a indicate an unwillingness on our part to supply the requested information, and if our suggestion is not satisfactory, we will proceed with gathering that information which

Northside Hall
1700 Mishawaka Avenue
Post Office Box 7111
South Bend, Indiana

219 237 4360
Fax: 219 237 4846

require a few weeks or more of my staff time to construct the complete information set for all users.

We shall immediately begin to gather the first set of information, some of which may have to wait until Monday, December 14, 1998 for my security officer/system administrator to return from a national meeting. I will await your advisement on the above offer before we begin the more protracted information gathering work since it is not possible to comply within the three days for those items, anyway.

I believe we can readily supply Appendix B, items 1 and 2, but the detail in 3, 4 and 5 may not be collected. Our [redacted] will know better about this. It occurs to me that the mail logs may be available for that period and may provide supplementary information about communication targets by the mail agent.

I believe we can supply Appendix C insofar as we can supply the items under Appendix B. b6 b7C

If I understand the request in Appendix D, that information will be contained in the information under Appendix A., insofar as information available to us.

Additionally, I will ask [redacted] to offer other logs which may be relevant to the investigation you detailed for us in your "application for" and to offer any other suggestions we initially observed after the situation had been first brought to our attention.

We shall begin complying with this order immediately and will await your counsel on the suggestion I offered above, since I would think it in no way hinders your investigation and may well speed up our ability to get the more important logs for your initial inspection.

Sincerely,

[redacted]

(U) ~~(S/~~(NF) Deputy Assistant Director [redacted] is scheduled to meet with the NIPC's Interagency Senior Coordinating Group on Monday 4/19/1999, to update them on the MMCG's activities and obtain information from the intelligence community about any recent intelligence collection concerning this matter.

BACKGROUND

(U) "MOONLIGHT MAZE" is the code name for a number of investigations of intrusions into various military, governmental, educational and other computer systems in the United States, United Kingdom, Canada, Brazil and Germany. Field investigations are being conducted by the Albuquerque, Baltimore, Cincinnati, Jackson, New Orleans, and Springfield Divisions as Offices of Origin and the Atlanta, Boston, Charlotte, Detroit, Indianapolis, Jacksonville, Knoxville, Mobile, New York, Pittsburgh, Salt Lake City, San Francisco, and Washington Field Divisions as Lead Offices. The National Infrastructure Protection Center

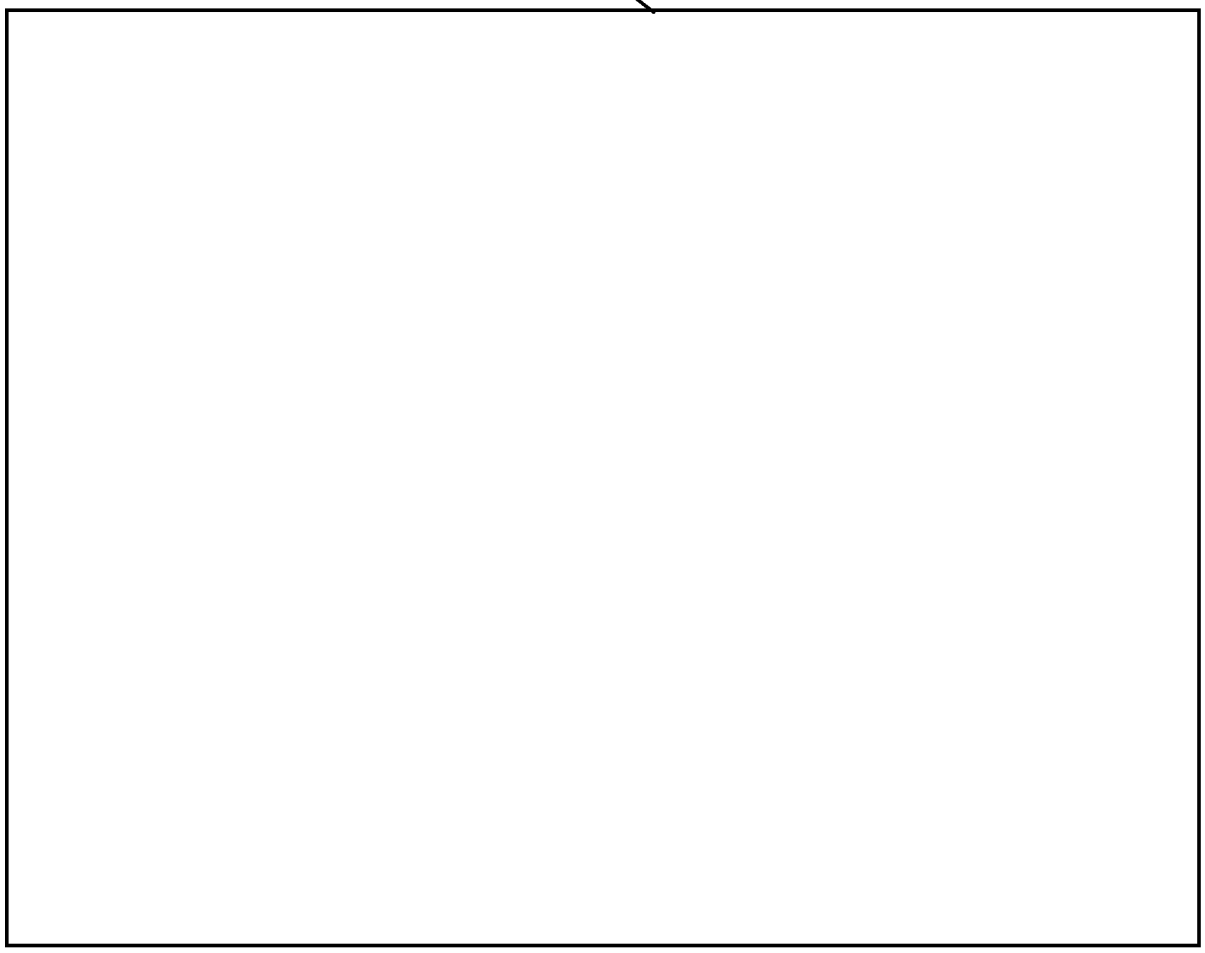
(NIPC) is coordinating these investigations with investigators from the Air Force Office of Special Investigations, Army, Naval Criminal Investigative Service, Defense Criminal Investigative Service, National Aeronautics Space Administration, Department Of Energy, Referral/Consult well as the [redacted] The NIPC is also coordinating internationally [redacted] b7D The NIPC has ensured that Legats London, Moscow and Ottawa are advised of the investigation in their respective territory.

(U) These investigations were initiated when intrusions were discovered at Wright Patterson Air Force Base (WPAFB), Ohio, and the Army Research Laboratory (ARL), Maryland, and other unclassified military systems, as well as various governmental, commercial and educational computer systems in the United States.

(U) The intruder(s) into WPAFB, went through the University of Cincinnati, Cincinnati, Ohio [redacted] A pen register and trap and trace [redacted] b3 b7E

(U) Intrusions into DOE systems include intrusion activity at Los Alamos National Laboratory (LANL), Sandia National Laboratory (SNL), Lawrence Livermore National Laboratory (LLNL), and Brookhaven National Laboratory. DOE's Computer Incident Advisory Capability (CIAC) has been active in this incident. Activity on DOE systems has been confined to unclassified networks.

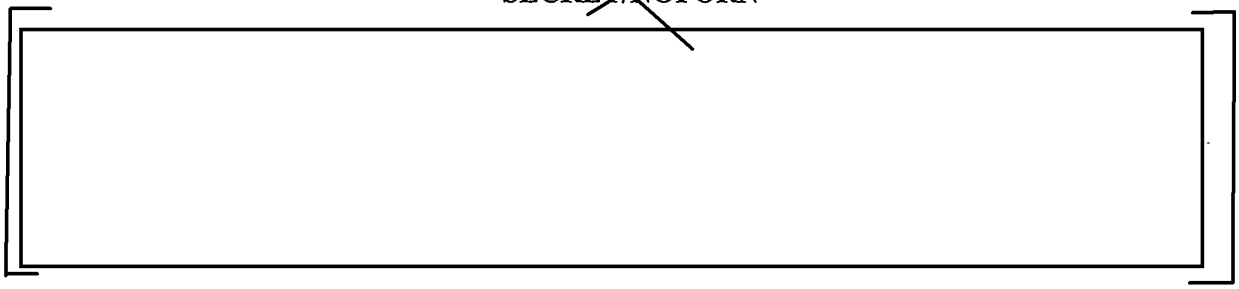
[redacted] b7D b7E



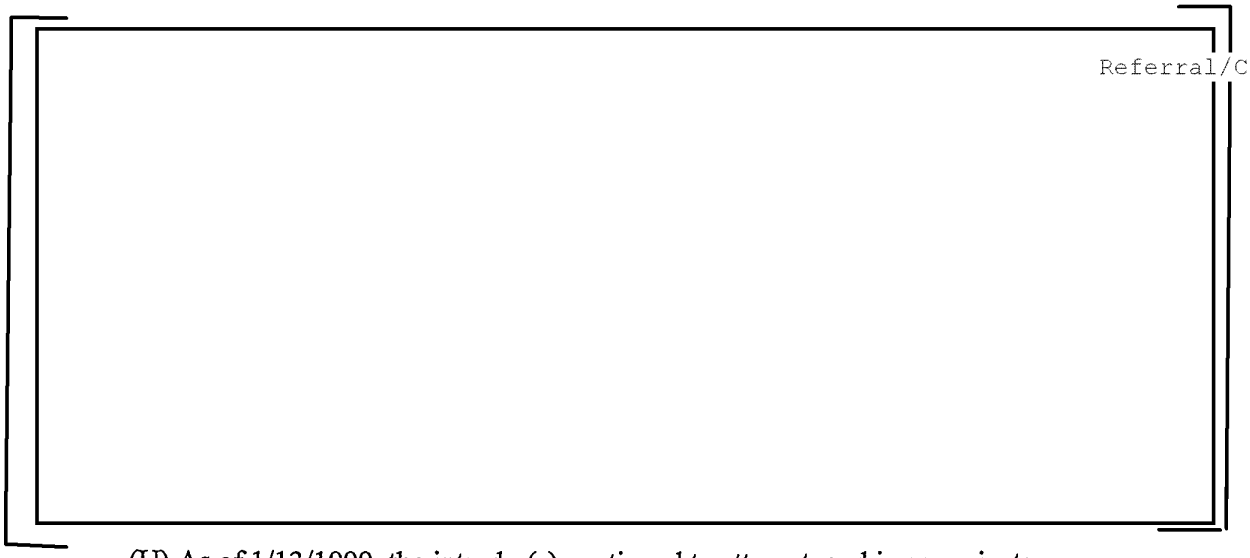
b3
b7C
b7D
b7E

(S/NF) On 12/12/1998, the Metropolitan Police in London, England, installed a new

Referral/Consult



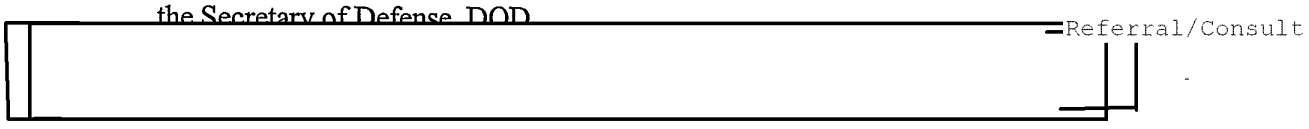
(U) On 1/8/1999, Deputy Assistant Director (DAD) Michael A. Vatis and Section Chief Kenneth M. Geide briefed Dr. Hamre, updating him regarding captioned matter.



(U) As of 1/13/1999, the intruder(s) continued to attempt, and in some instance succeeded, in intruding into Department of Defense (DOD) computer systems. The intruder(s) continues to mainly operate Monday through Friday during European business hours. Notably, the intruder(s) was active on 12/25/1998, a weekday, but was not active on 1/7-8/1999, both weekdays and Orthodox Christmas holidays in Russia.

(S/NF) On 1/13/1999, DAD Vatis hosted a meeting with senior representatives from the agencies involved in captioned matter (as victims and/or investigators). The principals who attended the meeting were:

Major General John Campbell, Commander, JTF-CND, DOD
Ms. Sheila Dryden, Principle Director for Security and Information Operations, Office of the Secretary of Defense, DOD



Referral/Consult

Mr. Edward Curran, Director, Office of Counterintelligence, DOE
Ms. Roberta Gross, Inspector General, NASA

(~~S~~/NF) The purpose of this meeting was to brief the status of captioned matter and to discuss next steps. The attendees were advised:

Referral/Consult

- that the NIPC is coordinating the investigation and analysis of "MOONLIGHT MAZE" with full participation by DOD, [redacted] DOE, NASA, Department of Justice

- that numerous FBI field offices are investigating this matter, collecting evidence (primarily transnational data) from the ever expanding number of victims

- that the NIPC Cyber Emergency Support Team (CEST) is providing technical assistance to victim sites and field offices, and is conducting the technical analysis of the transnational logs obtained from the victim sites

Referral/Consult

- that the NIPC is working with Army and Navy to determine the feasibility and desirability for setting up an electronic "honeypot" to assist in attributing the intrusions

b7D

- that the NIPC was considering making contact [redacted] to request assistance in resolving this investigation

Referral/Consult

Referral/Consult

(U) On 1/16/1999, investigation determined that an account belonging to [redacted] During an interview of [redacted] by his supervisor, on 1/22/1999, he admitted to illicitly downloading files from [redacted] using his wife's account on 1/15/1999. [redacted] stated that he did not know that [redacted] was being monitored when he signed onto the "it" account to obtain a copy of the hacker tools. [redacted] only had the IP address of where the tools were located. Once signed onto the [redacted] system, [redacted] followed the intruder's path, in an effort to locate the tools. [redacted] unable to locate the tools in a specific directory, subsequently began searching the intruder's directories for files and downloaded three files to his machine in Ellicott City, Maryland. FBI Baltimore executed a search warrant at [redacted] residence, seizing five computers, two of which were owned by [redacted] employer. The systems are being examined by the Computer Analysis and Response Team (CART), Laboratory Division.

b6
b7C
b7E

(U) On 1/18/1999, the NIPC was notified from the victimized [redacted] site in London regarding a compromise at the Brookhaven National Laboratory, located in Long Island, New York. Also compromised the same day was an Army network located in Vicksburg, Mississippi. The compromise was of a super computing center containing Cray and IBM supercomputers. The Army CID is determining the damage to the supercomputers.

[redacted]

b7D

[redacted]

Referral/Consult

(U) On 2/25/1999, the FBI briefed captioned matter to key staff members of the House Permanent Select Committee for Intelligence and the Senate Select Committee for Intelligence. Representatives from [redacted] and DOD's Joint Task Force - Computer Network Defense (JTF-CND) also participated in these briefings.

[redacted]

(U) [redacted] requested to be told, "without compromising the investigation, what is going on?" [redacted] asked "Is Weldon exaggerating? How do the recent attacks differ from what has happened so far (Weldon says the 'electronic Pearl Harbor' of which Hamre spoke last year has gone from if to when and the when is today)?" [redacted] would like to speak to somebody at the Pentagon, "on the record about this."

b6
b7C

(U) On 2/25/1999, and again on 2/26/1999 [redacted] attempted to telephonically contact Douglas G. Perritt, Deputy Director, NIPC, in an effort to obtain comment regarding comments attributed to Representative Weldon. Perritt has not responded to [redacted] telephone calls.

(U) On 3/1/1999, Defense Week published an article "Hamre to Hill: 'We're in a Cyberwar'," a copy of which is attached, concerning Dr. Hamre's testimony. The article does not mention the Russian connection, but otherwise captures the gist of Dr. Hamre's testimony.

Referral/Consult

[redacted]

Referral/Consult

(U) On 3/4/1999, ABC Nightly News and the ABCNEWS.com web site aired a story "Target Pentagon: Cyber-Attack Mounted Through Russia." This report apparently stems from the earlier report, on 3/1/1999, by Defense Week, concerning Deputy Secretary of Defense John Hamre's testimony on "MOONLIGHT MAZE" before the House National Security Committee and the Research and Development Sub-Committee. Other related articles which have also been posted on the web are: "US Currently Under Cyber Attack?" posted by AntiOnline on 3/4/1999; "Pentagon and Hackers in 'Cyberwar'," posted by MSNBC on 3/4/1999; "Pentagon hackers traced to Russia," posted by CNNInteractive on 3/5/1999; "Pentagon 'at war' with computer hackers," posted by CNNInteractive on 3/5/1999; and "Electronic Desert Storm," posted by AntiOnline on 3/5/1999. The New York Times and New York Times Online also posted two articles, "Computer Hackers are Stopped," and "Hacker 'Attacks' On Pentagon May Be More Like Espionage," posted 3/5/1999, and 3/8/1999, respectively, regarding this investigation. A copy of these articles are attached to this note. Reports of information attributed to interviews of Representative Curt Weldon, Chairman, House National Security Committee, and Deputy Secretary of Defense Hamre, have also been aired periodically on CNN Headline News since 3/5/1999. The ABC story reported that "the Pentagon's military computer systems are being subjected too ongoing, sophisticated and organized cyber-attacks. And unlike in past attacks by teenage hackers, officials believe the latest series of strikes at defense networks may be a concerted and coordinated effort coming from abroad." Until Friday, the Defense Department had not publicly acknowledged this latest cyber-war. But in an interview with ABCNEWS, Deputy Secretary of Defense Hamre, who oversees all Pentagon computer security matters, confirmed the attacks have occurred over the last several months and called them 'a major concern.' The ABCNEWS article noted that "this is an ongoing law enforcement and intelligence matter. Officials believe some of the most sophisticated attacks are coming from Russia. Federal investigators are detecting probes and attacks on U.S. military research and technology systems -- including the nuclear weapons laboratories run by the Department of Energy."

(U) The 3/8/1999, New York Times article stated that "In recent weeks, Government officials involved with defense have described a new kind of 'cyberwar' being fought on the

Internet, with unknown hackers unleashing relentless assaults on military computers." This article noted that ". . . some computer security experts stress that while the hacker activity that the House heard about is a potential threat, calling it an attack could be an overstatement." This article also noted that "The Pentagon has said that, as is the case with the vast majority of hacking attempts, the recent probes did not result in the penetration of any computers storing sensitive information." Representative Weldon is quoted as stating "We know of banks who've had their fire walls broken and money transferred out, and they're not going to talk about it." Representative Weldon noted that the private sector needs to cooperate more with the government "in this area."

(U) In light of the press coverage, the consensus among the participating agencies was that we had no real choice but to go directly to [redacted] with a request for assistance to investigate selected intrusion activity captured during this investigation. The NIPC, working with the Department of Justice and other Federal Investigative Agencies, [redacted] b7D [redacted] The MMCG, described below, prepared an operations plan, which was subsequently approved. [redacted] Referral/Consult

(U) In spite of the ABC story on 3/4/1999, intrusions continued. On 3/5/1999, between 0228 and 0906 Eastern Standard Time (EST), there were two intrusions into LLNL, one intrusion into Lawrence Berkeley Laboratory (LBL), and one intrusion into Argonne National Laboratory passing through Jefferson County Library [redacted] b7E

[redacted] These intrusions are consistent with other intrusions associated with "MOONLIGHT MAZE." These intrusions are significant in that they occurred well after the national press releases regarding the "MOONLIGHT MAZE." b7E

(U) On 3/1/1999, the MMCG was established to strengthen the focus and assessment of the intrusion activities related to this investigation. The MMCG is composed of forty personnel from the following law enforcement, intelligence and Computer Emergency Response Teams (CERT) organizations: JTF-CND, DISA, Department of Justice (DOJ), Department of Energy (DOE), National Aeronautical and Space Administration (NASA), Air Force Office of Special Investigations (AFOSI), Naval Criminal Investigative Service (NCIS), Defense Criminal Investigative Service (DCIS), US Army Criminal Investigative Division (USACID), US Army Military Intelligence (USAMI), Defense Intelligence Agency (DIA), [redacted] Referral/Consult [redacted] Air Force Information Warfare Center (AFIWC), Navy CERT, Army CERT, FBI Baltimore, Eurasian Section, National Security Division and the NIPC.

[redacted] b7D

(U) On 4/2/1999, a team from the MMCG deployed to Moscow, Russia to work [redacted] b7D [redacted] this matter. The team returned to Washington, D.C. on 4/10/1999. Prior to departure, the team received security briefings from FBIHQ security personnel and NSD Russian Program Managers, [redacted] Referral/Consult Concurrence regarding the investigative teams travel have been obtained from the FBI International Relations Branch (IRB), Legat Moscow and U.S. Ambassador Collins.

(U) I will keep you apprised of significant developments regarding this matter.

UNSUB(S), AKA VICODINES;
ET AL;
MELISSA VIRUS;
IMPAIRMENT - INFO SYSTEMS;

Synopsis: To request all field offices to gather and report damages to victims infected by the Melissa Macro Virus.

Details: For information of receiving offices, the Newark Division is requesting the assistance of all field offices in identifying and reporting damages caused by the Melissa Macro Virus ("MMV") to corporations, organizations and agencies, including federal, state and local government, in their respective territories. The following is a summary of investigative activities and developments pertaining to the ongoing investigation of the MMV:

On 3/26/99, the MMV was proliferated on an America Online ("AOL") network news server through a posting to the alt.sex newsgroup using a stolen AOL account belonging to the screen name [redacted] An attachment to the posting contained names of alleged "cracked" pornographic websites. The newsgroup posting contained a file called list.zip which contained a document called list.doc. The list.doc document contained the MMV. The MMV infected those using Microsoft Windows, and Microsoft Word, Outlook and Outlook Express. MMV was coded to send an infected document to the first (50) addresses in each users email address book. The compounding effect of MMV proliferation caused many email servers throughout the U.S. and

SAC

[redacted]

b6
b7C

[redacted]

Lead to [redacted]
~~288A-NK-99~~

rest of the world to crash. Systems administrators and Information Technology personnel scrambled to mitigate the effects of MMV on their systems.

On 4/1/99, the Newark Division and the New Jersey State Police (NJSP) High Technology Crime Unit arrested [redacted] pursuant to a state of New Jersey arrest warrant obtained from Monmouth County Superior Court Judge [redacted] was charged with second degree offenses of interruption of public communication, conspiracy to commit the offense and attempt to commit the offense, third degree theft of computer service, and third degree damage or wrongful access to computer systems relating to the propagation of the computer macro virus known as "MELISSA". Earlier that evening, prior to the arrest of [redacted] the Newark Division and the NJSP executed a state of New Jersey search warrant at [redacted] residence [redacted]

b6
b7C

The initial information leading to the arrest and execution of search warrants came from America Online, Inc., Dulles, VA, [redacted] contacted the State of New Jersey Attorney General's Office with lead information with respect to MELISSA. The State Attorney General's Office enlisted the NJSP High Technology Crime Unit who in turn enlisted the assistance of the Newark FBI NIPC squad.

Additionally, Newark and the NJSP have executed search warrants at [redacted] On 4/16/99, Newark and the NJSP seized from AT&T (14) back-up cartridges and other computer evidence from [redacted]

b6
b7C

The District of New Jersey U.S. Attorney's Office and the Attorney General's Office for the state of New Jersey anticipate returning simultaneous indictments on or about October 31, 1999. To aid the prosecution, it has been requested that Newark obtain detailed victim information relating to damages caused by the Melissa Macro Virus. This information is critical to the prosecution of captioned subject(s).

Questions regarding this communication should be directed to SA [redacted] Newark Division's NIPC Squad at Franklin Township RA, telephone [redacted]

To: All Field Offices From: Newark
Re: 288A-NK-99660, 10/06/1999

LEAD (s):

Set Lead 1:

ALL RECEIVING OFFICES

Newark requests all field offices to identify victim corporations, organizations and agencies, including federal, state and local government, in their respective territories infected by the Melissa Macro Virus ("MMV"). Newark recognizes that this is an inherently difficult task and asks field offices to utilize liaison contacts, including those developed through the Key Asset and InfraGard Programs where applicable. Field divisions are also asked to identify and follow-up on any complaints previously received relating to MMV and report those instances to Newark. If necessary, Federal Grand Jury subpoenas will be made available when requested.

Victims should report, in dollars, their best calculation of the damages caused by MMV. Victims may be asked to verify their reported damages in federal court. Information requested should detail the nature and extent of damages caused by MMV including, but not limited to, the following areas: email servers, desktop computers and other computer hardware affected; computer system downtime; personnel time, including overtime, for corrective action; lost productivity; lost contracts and missed business opportunities; diminished profits; consulting expenses; infrastructure costs; lost customers; and sensitive data leakage.

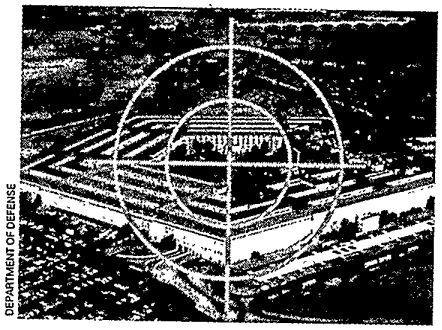
'we're in the middle of a cyberwar'

RUSSIAN HACKERS MAY HAVE PULLED OFF WHAT COULD BE THE MOST DAMAGING BREACH EVER OF U.S. COMPUTER SECURITY

BY GREGORY VISTICA

IT'S BEING CALLED "Moonlight Maze," an appropriately cryptic name for one of the most potentially damaging breaches of American computer security ever—serious enough for the Department of Defense to order all of its civilian and military employees to change their computer passwords by last month, the first time this precaution has ever been taken en masse. The suspects: crack cyberspooks from the Russian Academy of Sciences, a government-supported organization that interacts with Russia's top military labs. The targets: computer systems at the Departments of Defense and Energy, military contractors and leading civilian universities. The haul: vast quantities of data that, intelligence sources familiar with the case tell NEWSWEEK, could include classified naval codes and information on missile-guidance systems. This was, Pentagon officials say flatly, "a state-sponsored Russian intelligence effort to get U.S. technology"—as far as is known, the first such attempt ever by Russia. Washington has not yet protested to Moscow. But Deputy Secretary of Defense John Hamre, who has briefed congressional committees on the investigation, has told colleagues: "We're in the middle of a cyberwar."



DEPARTMENT OF DEFENSE

In a cyberwar, the offensive force picks the battlefield, and the other side may not even realize when it's under attack. Defense Department officials believe the intrusions, which they describe as "sophisticated, patient and persistent," began at a low level of access in January. Security sleuths spotted them almost immediately and "back-hacked" the source to computers in Russia. Soon, though, the attackers developed new tools that allowed them to enter undetected (although they sometimes left electronic traces that could be reconstructed later). Intelligence sources say the perpetrators even gained "root level" access to some systems, a depth usually restricted to a few administrators. After that, "we're not certain where they went," says GOP Rep. Curt Weldon, who has held classified hearings on Moonlight Maze.

As a federal interagency task force begins its damage assessment, a key question is whether the Russians managed to jump from the unclassified (although non-public) systems where they made their initial penetration into the classified Defense Department network that contains the most sensitive data. Administration officials insist the "firewalls" between the networks would have prevented any such intrusion, but other sources aren't so sure. Besides, one intelligence official admitted, classified data often lurk in unclassified databases. With enough time and computer power, the Russians could sift through their mountains of pilfered information and deduce those secrets they didn't directly steal. That's one more thing to worry about, although security officials admit that they have a more pressing concern. The intruders haven't been spotted on the network since May 14. Have they given up their efforts—or burrowed so deeply into the network that they can no longer even be traced?

Chinese hackers to enter the country's security systems. "We have set up a round-the-clock monitor system and installed various security programs and firewalls to keep the Chinese Communists from trying to disrupt our networks," said Chang Chia-sheng, the defense ministry's cyber information head. The military and security networks are independent with no links to the Internet, making it difficult for Chinese hackers to sabotage, Chang said. Taiwan's security authorities have discovered more than 7,000 recent attempts by Chinese hackers to enter the island's security and military systems through Internet Web sites, Chang said.

Military - NTR

U.S. SECTOR INFORMATION:

Banking and Finance - (U) (Newsbytes, 7 March) Although some reports seem to indicate that online banking is not having the acceptance once predicted for this online service, a recently released report to an Independent Community Bankers of America conference by Grant Thornton, LLP, a major accounting and management consulting firm, states that community banks recognize the need to use the Internet to serve and retain customers. In an interview with Newsbytes, Linda Garvelink, director of marketing for financial services at Grant Thornton, defined "community banks" as those which are focused on their local communities, are independent in attitude and direction, and generally have assets under $10 billion. The banks participating in the survey have average assets for 1999 of $195 million, and nearly two-thirds are privately held. The Grant Thornton survey found that, by the end of 2000, 78 percent of community banks will have a Web site - a substantial increase from the 55 percent that had Web sites at the end of 1999.

Case ID # (U) ~~(S)~~ 288A-CI-68562 - 112 (Pending Inactive)

Title (U) ~~(S)~~ MOONLIGHT MAZE

Synopsis: (U) ~~(S)~~ Explanation for tardiness of evidence returned to the CI Division's evidence storage room beyond the ten day rule.

(U) ~~(S)~~ ~~Derived From : G-3~~
~~Declassify On: X1~~

Details: (U) ~~(S)~~ For information of the file, pursuant to a review of all pending CI Division cases with evidence collected, instant communication addresses the reason for collected evidence returned to the CI Division's evidence storage room beyond the ten day rule.

(U) ~~(S)~~ A review of the Chain of Custody, FD-192, reveals that the collected evidence was returned to the United States Air Force Office of Special Investigations (AFOSI), upon learning that the CI FBI Division did not have the capability to duplicate working copies of computer data disks and cartridges. As a result, the collected evidence was furnished to AFOSI and was sent to a computer laboratory in Washington D.C. for analysis prior to its return to the CI FBI Field Office for proper storage.

(U) ~~(S)~~ The aforementioned response unequivocally explains the short delay in returning collected evidence to the CI Division's storage room.
